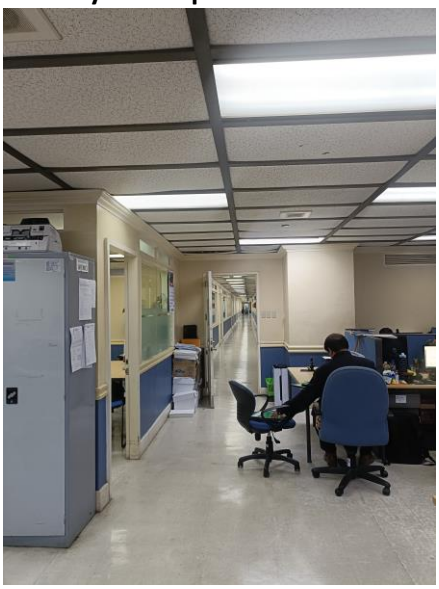
Host Company	Department Assigned to		
COMMISION ON APPOINTMENTS	DATABANK AND LIBRARY SERVICES (DLBS)		
Schedule (Date):	Number of Working Hours:		
FEBRUARY 9, 2026	450		

Weekly Accomplishments



Monday

My first day began at 7:00 AM as I arrived at the Databank and Library Services department. I spent the morning introducing myself to the staff and familiarizing myself with the office environment. At 9:00 AM, I participated in the flag ceremony, which was hosted by the Office of the Deputy Secretary for Legal Affairs. Later in the afternoon, around 2:00 PM, Ma'am Wilma assisted me in enrolling my fingerprint into the biometric system to ensure my Daily Time Record (DTR) is accurately tracked for the end-of-the-month reporting.

Tuesday

The second day focused on technical skill assessment and hardware maintenance. Sir Bien assigned us to develop a simple CRUD (Create, Read, Update, Delete) application using React and Firebase, which we later expanded to include MySQL integration. In the afternoon, we transitioned from software to networking tasks. We were assigned to go to the Human Resources and General Services departments to identify and verify the IP addresses of the printers stationed there to ensure proper network connectivity.

Wednesday

On Wednesday, Sir Bien tasked us with building another CRUD system, this time utilizing PHP with XAMPP and the CodeIgniter 4 framework. Following this, the discussion shifted toward the department's Library System; we were given the option to either build a new one or modify the existing version currently in the development phase. We

spent the remainder of the day reviewing the "in-development" system, performing a walkthrough of its features, and providing feedback for its improvement.

Thursday

We started the day by requesting Sir Bien's permission to build the new library system from scratch to ensure a deeper understanding of the logic and data flow, which he officially approved. After the planning phase, we performed a hands-on hardware task where we crimped RJ45 connectors using the T568B standard and successfully established a connection between a PC and a printer.
